

Neupogen **Neupogen (Filgrastim) is a colony stimulating factor used for neutropenia.**

Febrile neutropenia- for uncomplicated fever and neutropenia (defined as fever less than 10 days in length); no evidence of pneumonia, cellulitis, abscesses, sinusitis, hypotension, multi-organ dysfunction, or invasive fungal infection; and no controlled malignancies. [6 months]

Prophylaxis for neutropenia- patient has one of the following risk factors: preexisting neutropenia due to disease; history of recurrent febrile neutropenia on myelosuppressive therapy of the same or lesser dose intensity; extensive prior irradiation of the pelvis or other areas containing bone marrows; expected neutropenia from highly myelosuppressive therapy; advanced malignancy with active tissue infection. [6 months]

Granulocyte stimulation for pre or post bone marrow transplantation (BMT) or progenitor cells transplantation (PBPC). [1 month]

Severe chronic neutropenia (ANC < 500 counts/uL) or myelodysplastic syndrome. [6 months]

Acute Lymphoblastic Leukemia (ALL) or Acute Myelogenous Leukemia (AML) after completion of myelosuppressive therapy. [6 months]
